The Future Home is Wise, Not Smart Gerhard Leitner, 2015-10-01 This book introduces the concept of the wise home. Whilst smart homes focus on automation technologies, forcing users to deal with complex and incomprehensible control and programming procedures, the wise home is different. By going beyond intelligence (or smartness) the wise home puts technology in the background and supports explicit (enhanced user-experience) as well as implicit (artificial intelligence) interaction adequate to the end-user's needs. The theoretical basis of the wise home is explored and examples for its application for future living are presented based on empirical studies and field work carried out by the author. Principles of HCI and the meaning of the home from differing scientific perspective are discussed and a research model (based on the concept of user experience (UX)) and iterations is introduced. This has resulted in field deployment guides being produced through a systematic development process. The Future Home is Wise, not Smart will be essential reading to home system developers, designers and researchers, responsible for smart home deployment or Ambient Assisted Living (AAL) who will get insights on how to follow a novel approach in developing and adapting smart home systems to their users' needs. Students with an interest in software design for pervasive systems will benefit by receiving information on how to develop and customise systems for the specific needs of living environments.

Practical Foundations for Programming Languages Robert Harper, 2016-04-04 This text develops a comprehensive theory of programming languages based on type systems and structural operational semantics. Language concepts are precisely defined by their static and dynamic semantics, presenting the essential tools both intuitively and rigorously while relying on only elementary mathematics. These tools are used to analyze and prove properties of languages and provide the framework for combining and comparing language features. The broad range of concepts includes fundamental data types such as sums

and products, polymorphic and abstract types, dynamic typing, dynamic dispatch, subtyping and refinement types, symbols and dynamic classification, parallelism and cost semantics, and concurrency and distribution. The methods are directly applicable to language implementation, to the development of logics for reasoning about programs, and to the formal verification language properties such as type safety. This thoroughly revised second edition includes exercises at the end of nearly every chapter and a new chapter on type refinements.

Undaunted Aspiration Kim Jenkins, 2021-11-26 Each of our lives is built on the foundation of our experiences, our exposures, our desires, our dreams, our values, our efforts, our willingness, and our sacrifices. Author Kim Jenkins' life is also built upon her curiosity, the insatiable desire that fuels her thoughts and dreams and always makes her wonder: What if? In *Undaunted Aspiration*, Kim shares her life story, discussing her journey from an inner-city neighborhood to a successful corporate career. She speaks about rising above barriers to find her version of success. It demonstrates how you, too, can unlock your potential and dare to live the life you desire, regardless of the obstacles you may have to overcome. This memoir is about making a commitment to yourself, even when no one understands your "why," and your "what" is foreign to everyone around you. Jenkins chronicles her path, discussing how she sought support and encouragement along the way. She shares how she learned to use disappointment as a catalyst to execute her vision, and how she leveraged negativity as fuel for her passion. *Undaunted Aspiration* offers a look at how she found allies, mentors, sponsors, and friends who helped pave the way for her — and with her. Kim's story encourages us to be brave and courageous and to empower ourselves to design our own reality. www.thekimjenkinsexperience.com

PBL in Engineering Education Aida Guerra, Ronald Ulseth, Anette Kolmos, 2017-09-13 *PBL in Engineering Education: International Perspectives on Curriculum Change* presents diverse views on the implementation of PBL from across the globe. The purpose is to exemplify curriculum changes in engineering education. Drivers for change, implementation descriptions, challenges and future perspectives are addressed. Cases of PBL models are presented from Singapore, Malaysia, Tunisia, Portugal, Spain and the USA. These cases are stories of thriving success that can be an inspiration for those who aim to implement PBL and change their engineering education practices. In the examples presented, the change processes imply a transformation of vision and values of what learning should be, triggering a transition from traditional learning to PBL. In this sense, PBL is also a learning philosophy and different drivers, facing diverse challenges and involving different actors, trigger its implementation. This book gathers experiences, practices and models, through which is given a grasp of the complexity, multidimensional, systemic and dynamic nature of change processes. Anette Kolmos, director of Aalborg PBL Centre, leads off the book by presenting different strategies to curriculum change, addressing three main strategies of curriculum change, allowing the identification of three types of institutions depending on the type of strategy used. Following chapters describe each of the PBL cases based upon how they implement the seven components of PBL: (i)

objectives and knowledge; (ii) types of problems, projects and lectures; (iii) progression, size and duration; (iv) students' learning; (v) academic staff and facilitation; (vi) space and organization; and (vii) assessment and evolution. The book concludes with a chapter summarizing all chapters and providing an holistic perspective of change processes.
