Enhanced Living Environments Ivan Ganchev, Nuno M. Garcia, Ciprian Dobre, Constandinos X. Mavromoustakis, Rossitza Goleva, 2019-01-18 This open access book was prepared as a Final Publication of the COST Action IC1303 “Algorithms, Architectures and Platforms for Enhanced Living Environments (AAPELE)”. The concept of Enhanced Living Environments (ELE) refers to the area of Ambient Assisted Living (AAL) that is more related with Information and Communication Technologies (ICT). Effective ELE solutions require appropriate ICT algorithms, architectures, platforms, and systems, having in view the advance of science and technology in this area and the development of new and innovative solutions that can provide improvements in the quality of life for people in their homes and can reduce the financial burden on the budgets of the healthcare providers. The aim of this book is to become a state-of-the-art reference, discussing progress made, as well as prompting future directions on theories, practices, standards, and strategies related to the ELE area. The book contains 12 chapters and can serve as a valuable reference for undergraduate students, post-graduate students, educators, faculty members, researchers, engineers, medical doctors, healthcare organizations, insurance companies, and research strategists working in this area.

Home Automation with Arduino Marco Schwartz, 2013-07-30 Design your own home automation systems using the Arduino platform ! Open-source hardware is the idea to build hardware systems and then to share the designs of these systems, like you would share the source code of an open-source software. This movement allowed people to share their designs so that other people of the community could use them and modify them. At the heart of this movement, the Arduino

platform was born: it is a software and hardware environment that allows rapid prototyping of small electronic circuits controlled by a microcontroller. And this changed everything for home automation. In this book, you will be guided through the basics of the Arduino platform, and you will learn how to use a wide range of sensors and actuators that are commonly used in home automation. Here is a non-exhaustive list of what you will be able to do after reading the book: Measure the temperature in your home, save it into a database and display the result in your browser Control a relay directly from your computer Create a motion-controlled light switch Create your own wireless motion sensor Build your own Arduino shield for home automation purposes You will also learn many skills that can be reused in other domains. You will learn of course about the Arduino platform and microcontrollers, but also about how to use a wide range of sensors: contact sensors, humidity sensors, motion sensors. You will also learn about software development, using the languages C, C++, Python, HTML, PHP, and JavaScript. Even if you are a beginner in all these domains, you will not have any problems to follow the projects in this book. For each project I explain every hardware connection between the different components and I go through every piece of code, so nobody is left behind while reading the book. - Author.

Vision, Instruction, and Action David Chapman, Massachusetts Institute of Technology. Artificial Intelligence Laboratory, 1991 *Vision, Instruction, and Action* clearly and cleverly describes a sophisticated integrated system called Sonja that takes instruction, can interpret its environment visually, and can play games (in this case the video game, Amazon) on its own. Sonja integrates advances in intermediate visual processing, interactive activity, and natural language pragmatics. In demonstrating that such systems, rare in artificial intelligence, are possible, David Chapman shows how discoveries in visual psychophysics can be incorporated into AI, how complex activity can result from participation rather than plan following, and how physical context can be used to interpret indexical instructions. Sonja is able to play a competent beginner's game of Amazon autonomously and at the same time can also make flexible use of human instructions in knowing how to kill off monsters, pick up and use tools, and find its way in a dungeon maze. It extends the author's previous work in developing a new theory of activity by addressing linguistic issues and providing a better understanding of the architecture underlying activity, incorporating many technical improvements. Sonja also models several pragmatic issues in computational linguistics, focusing on external reference and including linguistic repair processing, and the use of temporal and spatial expressions. It connects language use with more detailed and realistic theories of vision and activity. In the field of vision research, Sonja provides an implementation of a unified visual architecture, demonstrating that this architecture can support a serious theory of activity. It demonstrates the first instance that various visual mechanisms previously proposed on psychophysical, neurophysiological, and speculative computational grounds can be made useful by connecting them with a natural task domain. David Chapman is a Computer Scientist with Teleos Research in Palo Alto.

Aboriginal Sign Languages of The Americas and Australia D. Umiker-Sebeok,2013-03-09 1. THE SEMIOTIC CHARACTER OF ABORIGINAL SIGN LANGUAGES In our culture, language, especially in its spoken manifestation, is the much vaunted hallmark of humanity, the diagnostic trait of man that has made possible the creation of a civilization unknown to any other terrestrial organism. Through our inheritance of a /aculte du langage, culture is in a sense bred into man. And yet, language is viewed as a force which can destroy us through its potential for objectification and classification. According to popular mythology, the naming of the animals of Eden, while giving Adam and Eve a certain power over nature, also destroyed the prelinguistic harmony between them and the rest of the natural world and contributed to their eventual expulsion from paradise. Later, the post-Babel development of diverse language families isolated man from man as well as from nature (Steiner 1975). Language, in other words, as the central force animating human culture, is both our salvation and damnation. Our constant war with words (Shands 1971) is waged on both internal and external battlegrounds. This culturally determined ambivalence toward language is particularly apparent when we encounter humans or hominoid animals who, for one reason or another, must rely upon gestural forms of communication.
