**QM/MM Studies of Light-responsive Biological Systems** Tadeusz Andruniów, Massimo Olivucci, 2020-10-27 This book, a consecutive contribution to the series *Challenges and Advances in Computational Chemistry and Physics*, focuses on understanding the photoinduced processes in biological systems. Understanding and fine control of light fate in molecules is vital for the progress of society and environmental safety. Light induced changes of various physico-chemical and spectroscopic properties in nucleic acids and proteins is the basis of fundamental biological events such as vision, DNA photodamage or photosensing. The investigation of these processes is challenging to both theoretical and experimental

studies. This volume encompasses the quantum mechanics/molecular mechanics theory in several subfields, including: advanced computational methods for nucleic acids and proteins systems; dynamics, spectroscopic and physico-chemical properties of biological photoreceptors; DNA photodamage. This book is of interest to readers in both fundamental and application-oriented research by overviewing recent achievements in computational modeling of excited states in nucleic acids and proteins.

*Clinical Systems Neuroscience* Kenji Kansaku, Leonardo G. Cohen, Niels Birbaumer, 2015-01-28 The impaired brain has often been difficult to rehabilitate owing to limited knowledge of the brain system. Recently, advanced imaging techniques such as fMRI and MEG have allowed researchers to investigate spatiotemporal dynamics in the living human brain. Consequently, knowledge in systems neuroscience is now rapidly growing. Advanced techniques have found practical application by providing new prosthetics, such as brain-machine interfaces, expanding the range of activities of persons with disabilities, or the elderly. The book's chapters are authored by researchers from various research fields such as systems neuroscience, rehabilitation, neurology, psychology and engineering. The book explores the latest advancements in neurorehabilitation, plasticity and brain-machine interfaces among others and constitutes a solid foundation for researchers who aim to contribute to the science of brain function disabilities and ultimately to the well-being of patients and the elderly worldwide.

**Design and Analysis of Long-term Ecological Monitoring Studies** Robert A. Gitzen, Joshua J. Millsbaugh, Andrew B. Cooper, Daniel S. Licht, 2012-06-07 To provide useful and meaningful information, long-term ecological programs need to implement solid and efficient statistical approaches for collecting and analyzing data. This volume provides rigorous guidance on quantitative issues in monitoring, with contributions from world experts in the field. These experts have extensive experience in teaching fundamental and advanced ideas and methods to natural resource managers, scientists and students. The chapters present a range of tools and approaches, including detailed coverage of variance component estimation and quantitative selection among alternative designs; spatially balanced sampling; sampling strategies integrating design- and model-based approaches; and advanced analytical approaches such as hierarchical and structural equation modelling. Making these tools more accessible to ecologists and other monitoring practitioners across numerous disciplines, this is a valuable resource for any professional whose work deals with ecological monitoring. **Tinkering** Curt Gabrielson, 2013-09-17 After-school and out-of-school programs—as well as home schooling—have been growing steadily for nearly a decade, but instructors are still searching for high-interest content that ties into science standards without the rigidity of current classroom canon. The author draws on more than 20 years of experience doing hands-on science to facilitate tinkering: learning science while fooling around with real things. In this book, you'll learn: Tinkering techniques in key science areas How to let kids learn science with hands-on tinkering Engaging techniques for science learning at home, in school, or at a makerspace or library Step-by-step instructions for activities that don't end with a single project, but that provide many paths for tinkering forward.

From Narratology to Computational Story Composition and Back L. Berov, 2023-03-10 Although both deal with narratives, the two disciplines of Narrative Theory (NT) and Computational Story Composition (CSC) rarely exchange insights and ideas or engage in collaborative research. The former has its roots in the humanities, and attempts to analyze literary texts to derive an understanding of the concept of narrative. The latter is in the domain of Artificial Intelligence, and investigates the autonomous composition of fictional narratives in a way that could be deemed creative. The two disciplines employ different research methodologies at contradistinct levels of abstraction, making simultaneous research difficult, while a close exchange between the two disciplines would undoubtedly be desirable, not least because of the complementary approach to their object of study. This book, From Narratology to Computational Story Composition and Back, describes an exploratory study in generative modeling, a research methodology proposed to address the methodological differences between the two disciplines and allow for simultaneous NT and CSC research. It demonstrates how implementing narratological theories as computational, generative models can lead to insights for NT, and how grounding computational representations of narrative in NT can help CSC systems to take over creative responsibilities. It is the interplay of these two strands that underscores the feasibility and utility of generative modeling. The book is divided into 6 chapters: an introduction, followed by chapters on plot, fictional characters, plot quality estimation, and computational creativity, wrapped up by a conclusion. The book will be of interest to all those working in the fields of narrative theory and computational creativity.

**Reaktives FE-Menschmodell im Insassenschutz** Emrah Yigit, 2018-03-01 Emrah Yigit erarbeitet eine Methodik zur Simulation menschlicher Bewegungen von Insassen in Notbrems-szenarien. Virtuelle Dummy-Modelle sowie passive virtuelle Menschmodelle bilden menschliche Bewegungen, insbesondere bei Pre-Crash-Lastfällen, unzureichend ab. Der Autor

beschreibt eine systematische Herangehensweise für die Weiterentwicklung eines passiven zu einem reaktiven FE-Menschmodell und untersucht Einflussfaktoren auf die Bewegungskinematik von Insassen. Die Entwicklung einer Methodik zur geregelten Muskelaktivierung aus FE Hill-type-Muskelementen sowie der  $\lambda$ -Regelung sind zentraler Bestandteil dieser Arbeit. Der Autor validiert das reaktive Menschmodell mittels Probanden-Daten und beschreibt die Limitationen und Abwägungen bei der Modellierung des Menschen sowie des Muskelmodells. Der Autor Emrah Yigit studierte Fahrzeugtechnik an der FH Frankfurt a. M. und Simulation Sciences an der RWTH Aachen. Seine Dissertation entstand in Kooperation mit der TU Bergakademie Freiberg sowie im Aufgabenfeld Fahrzeugsicherheit bei einem großen Automobilkonzern, bei dem er weiter tätig ist.
