Heuristic Analysis of Large Trees as Generated in the Game of Go Jonathan Leonard Ryder,Stanford University. Computer Science Department,1971 The Japanese game of Go is of interest both as a problem in mathematical

representation and as a game which generates a move tree with an extraordinarily high branching factor (100 to 300 branches per ply). The complexity of Go (and the difficulty of Go for human players) is thought to be considerably greater than that of chess. The constraints of being able to play a complete game and of being able to produce a move with a moderate amount of processing time were placed on the solution. The basic approach used was to find methods for isolating and exploring several sorts of relevant subsections of the global game tree. This process depended heavily on the ability to define and manipulate entities of Go as recursive functions rather than as patterns of stones. A general machine-accessible theory of Go was developed to provide context for program evaluations. A program for playing Go is now available on the Stanford PDP-10 computer. Your 2019 iPad Cathy Young, 2019-05-03 So, you have a new iPad. A hearty congratulations to you! No doubt you've heard about messaging, email, and productivity apps. My goal is to help you enjoy the wonder of discovering your iPad. Along the way, I want to:

- Demonstrate the cool and awe-inspiring features of the iPad. These aren't random tips and tricks. Instead, I have showcased them in a way that lets you find them while exploring a particular feature or topic.
- Help you find what you want, when you want it. The organized and detailed Table of Contents includes 600 topics. Skip around to your heart's content.
- The Visual Index showcases over 125 icons for Apple apps, third-party apps, and iOS controls and icons. Next time you wonder "What does that icon mean?" you'll have an answer at your fingertips.
- Explore over 175 third-party apps in Chapter 7, including IFTTT. When a manufacturer doesn't have an app that does what you want, chances are they do have IFTTT integrations. Logitech Harmony, eBay, and Twitter IFTTT services are discussed in Chapter 7. We also cover creating your own IFTTT applets and multi-step IFTTT Maker apps.
- Use multitasking to split your screen and work with two apps simultaneously as outlined in Chapter 4. In Chapter 6 learn how to open two Safari browser windows side-by-side.
- Set up a shared grocery list and add items with your digital assistant. Everyone in your family can view and check off items on your family's grocery list. Use Siri, Alexa, Google Home, or Microsoft Cortana to add items to your grocery list. Chapter 7 covers setting up iOS family sharing and a shared iOS reminder list. Steps for creating IFTTT integrations that link iOS reminders and digital assistants are also included.
- iOS 12 introduced "Passwords & Accounts." All your accounts and passwords are stored in one place - your iCloud Keychain. Your security information is available on any Apple device when you authenticate with Face ID, Touch ID, or your passcode. iOS 12 will generate strong passwords for you, identify weak passwords, and autofill. Chapter 3 has the details.
- Create your own Siri Shortcuts, or take advantage of Third-Party apps that support the "Add to Siri" options. Apps like AirBnB and Waze support Siri Shortcuts. Search for a location in Waze like your work address, and add it as a Siri Shortcut. Simply say, "Siri, Go to Work" and Siri launches the Waze app and navigates to the location. Chapter 6 includes details and examples of the new "Shortcuts" app.
- iMessages support Digital Touch, Camera Effects, sending cash with Apple Pay, and so much more. Chapters 4 and 6 have detailed examples.
- The iWork apps

are designed for Apple Pencil. Smart annotation anchors comments and proof marks to the original text in the Pages app, so that document changes occur around the smart annotations. • Learn how to set up custom app notifications. iOS 12 uses geofencing to silence alerts until you leave a location. Temporarily silence alerts for a period of time, or for a particular app. Chapter 5 covers all the details of the Notification Center and demonstrates calendar alerts, mail VIP alerts, and more. • Turn on the “Speak Screen” setting to listen to the content of the screen. This feature works with any app, but I love it for books, as shown in Chapter 3. This book is specifically for the 2019 Air and Mini iPad, with iOS 12. Much of the content does apply equally to older iPad models, as well as Apple devices running iOS 12. Are you ready for the iPad experience? Let's get started.

Handbook on Federated Learning Saravanan Krishnan,A. Jose Anand,R. Srinivasan,R. Kavitha,S. Suresh,2024-01-09

Mobile, wearable, and self-driving telephones are just a few examples of modern distributed networks that generate enormous amount of information every day. Due to the growing computing capacity of these devices as well as concerns over the transfer of private information, it has become important to process the part of the data locally by moving the learning methods and computing to the border of devices. Federated learning has developed as a model of education in these situations. Federated learning (FL) is an expert form of decentralized machine learning (ML). It is essential in areas like privacy, large-scale machine education and distribution. It is also based on the current stage of ICT and new hardware technology and is the next generation of artificial intelligence (AI). In FL, central ML model is built with all the data available in a centralised environment in the traditional machine learning. It works without problems when the predictions can be served by a central server. Users require fast responses in mobile computing, but the model processing happens at the sight of the server, thus taking too long. The model can be placed in the end-user device, but continuous learning is a challenge to overcome, as models are programmed in a complete dataset and the end-user device lacks access to the entire data package. Another challenge with traditional machine learning is that user data is aggregated at a central location where it violates local privacy policies laws and make the data more vulnerable to data violation. This book provides a comprehensive approach in federated learning for various aspects.
