Rise and Fight Again Spencer Tucker, 2023-09-19 Next only to Continental army commander General George Washington, Nathanael Greene was the most important American general of the War for Independence. Self-taught but extraordinarily capable, Greene won few battles. But his campaign that won the South for the revolutionary cause was the most brilliant and daring of the entire war. In *Rise and Fight Again*, award-winning military historian Spencer Tucker tells the story of Greene's rise from relative obscurity to military prominence at the tender age of thirty-two. He reveals Greene to have been a strict disciplinarian who insisted on rigorous training but was also deeply concerned for the welfare of his men. Tucker also shows that Greene was by nature a problem-solver who recognized talent and knew how to harness it effectively. Indeed, although Greene was the youngest general in his army, Washington assigned him the herculean task of serving as its quartermaster general. Greene proved so effective in this demanding assignment that in October 1780 he was given command of the Southern Department. Taking charge of a sharply depleted, dispirited force lacking all manner of military equipment and even clothing, Greene refused to be drawn into pitched battles save on favorable terms. He rebuilt the Southern army in less than a year and adopted daring tactics that defied conventional military wisdom but recaptured from British control most of the Carolinas and Georgia. Greene has rarely been accorded his earned place in the history of the American founding, in part because of his early death in 1786, when he was just forty-three. But with Tucker's brief but masterful biography, Greene finally gets his due.

Nathanael Greene Gerald M. Carbone, 2008-06-24 When the Revolutionary War began, Nathanael Greene was a private in

the militia, the lowest rank possible, yet he emerged from the war with a reputation as George Washington's most gifted and dependable officer--celebrated as one of three most important generals. Upon taking command of America's Southern Army in 1780, Nathanael Greene was handed troops that consisted of 1,500 starving, nearly naked men. Gerald Carbone explains how within a year, the small worn-out army ran the British troops out of Georgia, South Carolina, and North Carolina and into the final trap at Yorktown. Despite his huge military successes and tactical genius Greene's story has a dark side. Gerald Carbone drew on 25 years of reporting and researching experience to create his chronicle of Greene's unlikely rise to success and his fall into debt and anonymity.

Emergent neural computation from the interaction of different forms of plasticity Cristina Savin, Matthieu Gilson, Friedemann Zenke, 2016-03-22 From the propagation of neural activity through synapses, to the integration of signals in the dendritic arbor, and the processes determining action potential generation, virtually all aspects of neural processing are plastic. This plasticity underlies the remarkable versatility and robustness of cortical circuits: it enables the brain to learn regularities in its sensory inputs, to remember the past, and to recover function after injury. While much of the research into learning and memory has focused on forms of Hebbian plasticity at excitatory synapses (LTD/LTP, STDP), several other plasticity mechanisms have been characterized experimentally, including the plasticity of inhibitory circuits (Kullmann, 2012), synaptic scaling (Turrigiano, 2011) and intrinsic plasticity (Zhang and Linden, 2003). However, our current understanding of the computational roles of these plasticity mechanisms remains rudimentary at best. While traditionally they are assumed to serve a homeostatic purpose, counterbalancing the destabilizing effects of Hebbian learning, recent work suggests that they can have a profound impact on circuit function (Savin 2010, Vogels 2011, Keck 2012). Hence, theoretical investigation into the functional implications of these mechanisms may shed new light on the computational principles at work in neural circuits. This Research Topic of Frontiers in Computational Neuroscience aims to bring together recent advances in theoretical modeling of different plasticity mechanisms and of their contributions to circuit function. Topics of interest include the computational roles of plasticity of inhibitory circuitry, metaplasticity, synaptic scaling, intrinsic plasticity, plasticity within the dendritic arbor and in particular studies on the interplay between homeostatic and Hebbian

plasticity, and their joint contribution to network function.

Tropical Agroforestry Alain Atangana,Damase Khasa,Scott Chang,Ann Degrande,2013-10-29 Agroforestry is recognized as a sustainable land-use management in the tropics, as it provides environmental-friendly ecosystems; it also provides people with their every day need for food and cash. Since the recognition of agroforestry as a science, curricula have been developed for agroforestry programs for undergraduate and graduate trainings in Universities. Therefore, there is an urgent need to develop and make available educational material. This textbook strives to provide up-to-date information on tropical agroforestry to serve as educational material in the tropical context. The authoritative textbook of Nair (1993) on agroforestry was published 18 years ago, and before the advent of tree domestication, an important agroforestry practice today. In addition, many other research activities, such as carbon sequestration and integrated pest management, have been included in the agroforestry agenda. This textbook is intended for agroforestry students, teachers, and practitioners.

Machine Learning Paradigms George A. Tsihrintzis,Dionisios N. Sotiropoulos,Lakhmi C. Jain,2018-07-03 This book explores some of the emerging scientific and technological areas in which the need for data analytics arises and is likely to play a significant role in the years to come. At the dawn of the 4th Industrial Revolution, data analytics is emerging as a force that drives towards dramatic changes in our daily lives, the workplace and human relationships. Synergies between physical, digital, biological and energy sciences and technologies, brought together by non-traditional data collection and analysis, drive the digital economy at all levels and offer new, previously-unavailable opportunities. The need for data analytics arises in most modern scientific disciplines, including engineering; natural-, computer- and information sciences; economics; business; commerce; environment; healthcare; and life sciences. Coming as the third volume under the general title MACHINE LEARNING PARADIGMS, the book includes an editorial note (Chapter 1) and an additional 12 chapters, and is divided into five parts: (1) Data Analytics in the Medical, Biological and Signal Sciences, (2) Data Analytics in Social Studies and Social Interactions, (3) Data Analytics in Traffic, Computer and Power Networks, (4) Data Analytics for Digital Forensics, and (5) Theoretical Advances and Tools for Data Analytics. This research book is intended for both experts/researchers in the field of data analytics, and readers working in the fields of artificial and computational intelligence as well as computer science in general who wish to learn more about the field of data analytics and its applications. An extensive list of

bibliographic references at the end of each chapter guides readers to probe further into the application areas of interest to them.
