Designing a Digital Portfolio Cynthia Baron, 2010 Portfolios have always been artists' most valuable tools for communicating their talents to the outside world, whether to potential employers or galleries or clients. But the days of sketches and slides have given way to arrangements of digital assets that are both simpler and more complex than their traditional analog counterparts. Instructor and design professional Cynthia Baron covers all the facets that artists need to know, from choosing the best work for a particular audience to using various file formats to organizing, designing, and presenting the portfolio. Beautiful full-color illustrations demonstrate her instructions, and case studies throughout portray examples of attractive and effective portfolio design. This book gives artists at any level a creative edge, ensuring that their portfolios get noticed and help them stand out from the crowd.

Lyapunov-Schmidt Methods in Nonlinear Analysis and Applications Nikolay Sidorov, Boris Loginov, A.V.

Sinitsyn, M.V. Falaleev, 2013-04-17 This book concentrates on the branching solutions of nonlinear operator equations and the theory of degenerate operator-differential equations especially applicable to algorithmic analysis and nonlinear PDE's in mechanics and mathematical physics. The authors expound the recent result on the generalized eigen-value problem, the perturbation method, Schmidt's pseudo-inversion for regularization of linear and nonlinear problems in the branching theory and group methods in bifurcation theory. The book covers regular iterative methods in a neighborhood of branch points and the theory of differential-operator equations with a non-invertible operator in the main expression is constructed. Various recent results on theorems of existence are given including asymptotic, approximate and group methods.

Foundations of Computer Vision James F. Peters, 2017-03-17 This book introduces the fundamentals of computer vision (CV), with a focus on extracting useful information from digital images and videos. Including a wealth of methods used in detecting and classifying image objects and their shapes, it is the first book to apply a trio of tools (computational geometry, topology and algorithms) in solving CV problems, shape tracking in image object recognition and detecting the repetition of shapes in single images and video frames. Computational geometry provides a visualization of topological structures such as neighborhoods of points embedded in images, while image topology supplies us with structures useful in the analysis and classification of image regions. Algorithms provide a practical, step-by-step means of viewing image structures. The implementations of CV methods in Matlab and Mathematica, classification of chapter problems with the symbols (easily

solved) and (challenging) and its extensive glossary of key words, examples and connections with the fabric of CV make the book an invaluable resource for advanced undergraduate and first year graduate students in Engineering, Computer Science or Applied Mathematics. It offers insights into the design of CV experiments, inclusion of image processing methods in CV projects, as well as the reconstruction and interpretation of recorded natural scenes.
