Molecular Catalysts for Energy Conversion Tatsuhiro Okada, Masao Kaneko, 2008-10-10 Over the past decade the topic of energy and environment has been acknowledged among many people as a critical issue to be solved in 21st century since the Kyoto Protocol came into effect in 1997. Its political recognition was put forward especially at Heiligendamm in 2007, when the effect of carbon dioxide emission and its hazard in global climate were discussed and shared universally as common knowledge. Controlling the global warming in the economical framework of massive development worldwide through this new century is a very challenging problem not only among political, economical, or social circles but also among technological or scientific communities. As long as the humans depend on the combustion of fossil for energy resources, the waste heat exhaustion and CO emission are inevitable. In order to establish a new era of energy saving and environment benign society, which is supported by technologies and with social consensus, it is important to seek for a framework where new clean energy system is incorporated as infrastructure for industry and human activities. Such a society strongly needs innovative technologies of least CO emission and efficient energy conversion and utilization from remaining fossil energies on the Earth. Energy recycling system utilizing natural renewable energies and their conversion to hydrogen may be the most desirable option of future clean energy society. Thus the society should strive to change its energy basis, from fossil-consuming energy to clean and recycling energy.

Diverging Space for Deviants Akira Drake Rodriguez,2021-05-15 This book explores the often-overlooked positive role of public housing in facilitating social movements and activism. Taking a political, social, and spatial perspective, the author offers Atlanta as a case study. Akira Drake Rodriguez shows that the decline in support for public housing, often touted as a positive (neoliberal) development, has negative consequences for social justice and nascent activism, especially among Black women. Urban revitalization policies target public housing residents by demolishing public housing towers and dispersing poor (Black) residents into new, deconcentrated spaces in the city via housing choice vouchers and other housing-based tools of economic and urban development. *Diverging Space for Deviants* establishes alternative functions for public housing developments that would necessitate their existence in any city. In addition to providing affordable housing for low-income residents—a necessity as wealth inequality in cities increases—public housing developments function as a necessary political space in the city, one of the last remaining frontiers for citizens to engage in inclusive political activity and make claims on the changing face of the state.

course of the Europhysics School of Quantum Electronics, held under the supervision of the Quantum Electronics Division of the European Physical Society. The Institute was held at Elba International Physics Center, Marciana Marina, Elba Island, Tuscany, Italy, August 31 -September 11, 1992. The Europhysics School of Quantum Electronics was started in 1970 with the aim of providing instruction for young researchers and advanced students already engaged in the area of quantum electronics or wishing to switch to this area from a different background. Presently the school is under the direction of Professors F.T. Arecchi and M. Inguscio, University of Florence, and Prof. H. Walther, University of Munich, and has its headquarters at the National Institute of Optics (INO), Florence, Italy. Each time the directors choose a subject of particular interest, alternating fundamental topics with technological ones, and ask colleagues specifically competent in a given area to take the scientific responsibility for that course.

Making Breakthrough Innovation Happen Porus Munshi, 2015-04-21 India is known as a country not of innovation but of improvisation-or 'Jugaad', as they say in Hindi. But that has begun to change. We have enough examples in this country of people who have turned industry norms upside down to pull off the impossible in their fields. Eleven such case studies are featured in the book, including: Titan, which came out with the slimmest water-resistant watch in the world; Su-Kam, a power backup company that did not fit into an existing industry but ended up creating a new one; Shantha Biotech, which developed a low-cost Hepatitis-B vaccine and ushered in the biotechnology age in India; Trichy Police, which rewrote policing paradigms to nip extremism and crime in the bud, thus transforming the city. Through the breakthroughs achieved by these organizations, Porus Munshi shows that to do what is considered 'impossible' in your particular industry, you have to be subversive and think differently. In the process, if the existing business model needs to be turned on its head, then so be it!

Internet of Things and Big Data Analytics Toward Next-Generation Intelligence Nilanjan Dey, Aboul Ella Hassanien, Chintan Bhatt, Amira S. Ashour, Suresh Chandra Satapathy, 2017-08-14 This book highlights state-of-the-art research on big data and the Internet of Things (IoT), along with related areas to ensure efficient and Internet-compatible IoT systems. It not only discusses big data security and privacy challenges, but also energy-efficient approaches to improving virtual machine placement in cloud computing environments. Big data and the Internet of Things (IoT) are ultimately two sides of the same coin, yet extracting, analyzing and managing IoT data poses a serious challenge. Accordingly, proper analytics infrastructures/platforms should be used to analyze IoT data. Information technology (IT) allows people to upload, retrieve, store and collect information, which ultimately forms big data. The use of big data analytics has grown tremendously in just the past few years. At the same time, the IoT has entered the public consciousness, sparking people's imaginations as to what a fully connected world can offer. Further, the book discusses the analysis of real-time big data to

derive actionable intelligence in enterprise applications in several domains, such as in industry and agriculture. It explores possible automated solutions in daily life, including structures for smart cities and automated home systems based on IoT technology, as well as health care systems that manage large amounts of data (big data) to improve clinical decisions. The book addresses the security and privacy of the IoT and big data technologies, while also revealing the impact of IoT technologies on several scenarios in smart cities design. Intended as a comprehensive introduction, it offers in-depth analysis and provides scientists, engineers and professionals the latest techniques, frameworks and strategies used in IoT and big data technologies.
