Solar Independent Utility Systems Manual Kyle William Loshure,2011-03-04 This book is about all the information Kyle learned over his 31 years of interest in solar power. This includes all the information you need to become 100% utility independent. The possibilities of sun electricity (solar power), rain, radiant heat, geothermal, battery banks, inverters, ac-dc lighting, water storage-recycling-filtration, water heating, wire sizing, refrigeration, cooking, fuses, conservation, photovoltaic solar panel positioning/placement, grid-tie, parallel, standalone systems, as well as an overview of how we got here through the inventions of Tesla, Franklin, Einstein, and Edison all are mentioned in this manual.

Learn Sun Power: the Illustrated Guide to Setting Up Batteries, Inverter, Charge Controller, and Panels for a Complete Off-Grid Solar Energy System with Over 190 Illustrations/graphics David Curran,2012-08-20 This is not an overview but programmed instruction. This book shows, step-by-step, how a 650-watt, off-grid, do-it-yourself solar-panel system was set up. The system partially replaced a 2-gallon-a-day gasoline-driven generator system and was estimated to pay for itself

(based on the price of gas) in about 2-3 years. Starting from the ground up, it explains the importance of grounding and explains how to ground the system as it is set up. Topics include: How to calculate overall energy needs and how to reconcile them with space concerns and affordability. Solar panel math is explained simply so that viewers can calculate their needs in terms of: batteries, inverters, panels and wiring. How to re-evaluate and reshape energy usage to fit what user can realistically afford is explained. How to set up typical inverters and charge controllers. Safety issues. How to connect wiring and figure out the wire size needed with an amazingly detailed appendix on wire size. How to set up a battery and inverter system first, and test them as a working unit before adding solar. What to consider when choosing solar panels. The difference between setting up panels and batteries in series or parallel. Using a combiner box to add additional panels later. Choosing a generator for backup or to equalize your batteries. How to test the specific gravity of batteries with or without a hydrometer. How to wire panels. Lightning grounding. As well as system layout, washing panels once they are setup, etc. The focus here is an easy to understand explanation of how to set up an independent, self-sustaining energy system that can support most of the needs of a small off-grid home. Although it covers an off-grid system it is just as helpful for someone who wants to be partially on grid but would rather set up the system themselves.
