**Extreme NXT** Michael Gasperi, Philippe Hurbain, 2010-03-16 Although LEGO MINDSTORMS NXT allows anyone to build complex inventions, there are limits to what you can do with what comes inside the box. This book shows you how to advance the NXT with more than 45 exciting projects that include creating a cool magic wand that writes words in thin air, building a remotely guided vehicle, and constructing sophisticated robots that can sense color, light, temperature, and more. All projects are explained with easy-to-follow, step-by-step instructions, so you'll be able to create them successfully whether you're a novice or an expert. This book also shows you how to expand the programming software and use the alternative language NXC. New input devices—such as keypads, sensors, and even the human body—are covered, along with fun games such as surfing, PONG, and SIMON. On the serious side, there are classic engineering challenges such as controlling an inverted pendulum, making a robot that follows a wall, and building several light-seeking vehicles. Some projects are just entertaining, such as the Etch-A-NXT; others are useful, such as a motorized camera mount that takes panoramic photographs. This second edition accounts for the important changes found in the next generation NXT, and it also covers the original concepts in greater depth. Details are presented for practically unlimited expansion of the NXT inputs and outputs by using the I2C communications bus, and several power amplifier designs allow the NXT outputs to drive bigger motors. Instructions are also included for adapting LEGO Power Functions motors to work directly with the NXT.

The YC-14 STOL Prototype John K. Wimpers, Conrad F. Newberry, 1998 Wimpers (retired, Boeing Aircraft Co.) And Newberry (Naval Postgraduate School, Monterey, CA) translate their nostalgia about an era when innovative design ideas and flying hardware dominated computer hardware into this case study of a technology demonstrator developed by Boeing for the US Air Force in the 1970s. Aircraft history aficionados should relish the numerous blueprints and bandw photographs.

*The Stockholder* William Walling,2021-09-10 A more immediate threat than climate change, the mid-21st-century energy dilemma inspires reclusive trillionaire Lyman Dysart ? called “The Stockholder” by his privately owned company employees ? to finance research and development of the ultimate energy solution: controlled nuclear fusion power generation. Plasma constituents of the patented “Omega Pinch” process are deuterium, which is plentiful, and the ultra-scarce, fusible helium isotope, found mainly on the moon. The isotope necessitates expensive strip-mining on the lunar surface. Panic ensues in the minds and wallets of the OPEC/conventional energy cartel led by Vonex Chairman Belkin Reichert, who brandishes behind-the-scenes political influence to suborn fusion’s advent by promoting solar energy, and eventually nationalization of the newborn industry. The battle of wills climaxes when Dysart attempts to defeat nationalization by holding hostage his lunar mining venture and its crucial product. His nuclear fusion propaganda campaign captures the public imagination by describing the innovative system as: “a plasma containment shell surrounded by huge cables, monstrous electromagnets and sophisticated ancillary equipment, at its heart a dervish of semi-vacuum burning so furiously that it emulates temperatures reigning at the center of the sun, yet gives forth no light, but presumes to light the world in a beneficent, utopian glow.”
