Robot Building for Beginners David Cook, 2010-07-30 “I wrote this book because I love building robots. I want you to love building robots, too. It took me a while to learn about many of the tools and parts in amateur robotics. Perhaps by writing about my experiences, I can give you a head start.” —David Cook *Robot Building for Beginners*, Second Edition is an update of David Cook’s best-selling *Robot Building for Beginners*. This book continues its aim at teenagers and adults who have an avid interest in science and dream of building household explorers. No formal engineering education is assumed. The robot described and built in this book is battery powered and about the size of a lunchbox. It is autonomous. That is, it isn’t remote controlled. You’ll begin with some tools of the trade, and then work your way through prototyping, robot bodybuilding, and eventually soldering your own circuit boards. By the book’s end, you will have a solid amateur base of understanding so that you can begin creating your own robots to vacuum your house or maybe even rule the world!

How To Build A Raspberry Pi Robot? Bernardo Minard, 2021-03-15 Raspberry Pi has proven its useful functions since it was released with minor size and inexpensive cost. As a result, it leads to the foundation of Raspberry Pi Robots (PiBot). It is clear that many people, who are interested in building robots, wonder how to make a Raspberry Pi Robot. In that case, this book is very helpful. This book takes you exhaustively through the process of building one, from installing the libraries needed to access the GPIO pins to configuring a wireless adapter to some suggestions (not explicit instructions) on how to construct the bot's body. The author also offers free support for those with questions or problems building their bot.

The BBC micro:bit is a tiny, cheap, yet surprisingly powerful computer that you can use to build cool things and experiment with code. The 30 simple projects and experiments in this book will show you how to use the micro:bit to build a secret science lab complete with robots, door alarms, lie detectors, and more--as you learn basic coding and electronics skills. Here are just some of the projects you'll build: A light guitar you can play just by moving your fingers A working lie detector A self-watering plant care system A two-wheeled robot A talking robotic head with moving eyes A door alarm made with magnets Learn to code like a Mad Scientist!

Arduino for Kids Priya Kuber, Rishi Gaurav Bhatnagar, Vijay Varada, 2017-03-23 A cool guide to help kids develop robots and electronics About This Book Get clearly-written code with descriptions and comments that explain each code section The

book comes with separate code files, one entire program at a time, as well as many diagrams and separate downloadable files that contain colored photos explaining steps in the book Kids can build multiple projects during the course of the book; by the end, they will have working projects of their own Who This Book Is For This book is for children aged 9 and up, and their parents, who may or may not have a technical background. This book is tailored around the central idea of introducing electronics as a fun and a curiosity-inducing exercise. This book can act as a bonding exercise between parent and child over a single weekend. What You Will Learn Write simple programs using variables, functions, loops, arrays, and libraries Set up the Arduino and understand its internal functioning Get to grips with connections in electronics and arrive at ways to connect various components yourself Delve into various sensors and their selection and build your own sensor Unravel the concept of resistors and capacitors along with understanding the physics of electronics Become an inventor through interactive exercises (such as making a friend happy with a proximity sensor, and giving life to a plant) In Detail The mission of this book is to integrate technology with the tools that children already use for crafts so that they feel that the technology is an extension of their playtime. We use coding, sensors, and micro-controllers integrated with art and craft supplies, origami, and Playdough. There are 10 fun-filled chapters that talk to children directly, and give clear instructions for non-technical parents too. We use Arduino as the controller of choice due to its easy availability and large community. By the end of the book, children will comfortably be able to set up their Arduino, read and understand code, manipulate code, and ultimately write their own code for projects. They will also be able to use basic sensors and know how components connect to each other. All the learning takes place with lots of colorful pictures and the circuits are neatly presented using wiring. Style and approach This book will show you the glamour of common and easily available sensors, so that kids and parents waste no time searching for parts. We provide simple yet fun projects with step-by-step instructions that make it easy to get hands-on.

Personal Robotics Richard Raucci, 2023-08-11 Many companies are now offering robots that are geared to the casual electronics hobbyist, both in kit form and as fully assembled models. This book gives an overview of available robot products, ranging from the simple to the complex. Interested readers will be able to find the robot kit that matches their skill level and pocketbook. Beginners may want to try a robot that is already fully assembled, or a kit with pre-assembled electronics. Other readers may opt for kits that require soldering and electronic experience. Other criteria a reader will be able to review include motion systems (robots that roll on wheels, or walk on legs, or robot arms), available sensors (from none to a wide range), and programming complexity (how the robot is programmed). If its not really a robot, its not in this book.

Teen Innovators Fred Estes, 2022-09-06 Teen Innovators tells the stories of discovery and the inventions of nine young students. For example, twelve-year-old Gitanjali Rao, appalled by the tragedy in Flint, Michigan, found a cheaper, more effective way to test for lead in drinking water. Four undocumented teenagers from an underfunded high school in Phoenix built an underwater robot from spare and found parts. Substituting hard work and creative thinking for money and expensive equipment, they won a national robotics competition, beating a well-funded team from MIT. At fifteen, William Kamkwamba used materials from junkyards near his home in Malawi to build a windmill to generate electricity and pump water for his village. While each profile tells a different story, the reader soon sees the common threads of determination and ingenuity. Stories include: Jack Andraka: improved pancreatic cancer test Gitanjali Rao: device to detect lead in drinking water William

Kamkwamba: improvised electrical generator using windmill in Malawi Austen Veseliza: digital display glove to aid people with speech impairment Deepika Kurup: easier, cheaper method to remove toxins from drinking water Cristian Arcega, Lorenzo Santillan, Oscar Vasquez, Luis Aranda: underwater robot Science educator and professor Fred Estes explores the motivation, challenges, and lives of these teen scientists and explains the science behind each invention simply and clearly. Readers will see how the science they study today in school relates to these important discoveries.

Programming Arduino Getting Started with Sketches Simon Monk, 2011-12-22 Program Arduino with ease! Using clear, easy-to-follow examples, *Programming Arduino: Getting Started with Sketches* reveals the software side of Arduino and explains how to write well-crafted sketches using the modified C language of Arduino. No prior programming experience is required! The downloadable sample programs featured in the book can be used as-is or modified to suit your purposes. Understand Arduino hardware fundamentals Install the software, power it up, and upload your first sketch Learn C language basics Write functions in Arduino sketches Structure data using arrays and strings Use Arduino's digital and analog inputs and outputs in your programs Work with the Standard Arduino Library Write sketches that can store data Program LCD displays Use an Ethernet shield to enable Arduino to function as a web server Write your own Arduino libraries In December 2011, Arduino 1.0 was released. This changed a few things that have caused two of the sketches in this book to break. The change that has caused trouble is that the classes 'Server' and 'Client' have been renamed to 'EthernetServer' and 'EthernetClient' respectively. To fix this: Edit sketches 10-01 and 10-02 to replace all occurrences of the word 'Server' with 'EthernetServer' and all occurrences of 'Client' with 'EthernetClient'. Alternatively, you can download the modified sketches for 10-01 and 10-02 from here: <http://www.arduinobook.com/arduino-1-0> Make Great Stuff!
