CMOS Telecom Data Converters Angel Rodríguez-Vázquez, Fernando Medeiro, Edmond Janssens, 2004-01-31 CMOS Telecom Data Converters compiles the latest achievements regarding the design of high-speed and high-resolution data converters in deep submicron CMOS technologies. The four types of analog-to-digital converter architectures commonly found in this arena are covered, namely sigma-delta, pipeline, folding/interpolating and flash. For all these types, latest achievements regarding the solution of critical architectural and circuitual issues are presented, and illustrated through IC prototypes with measured state-of-the-art performances. Some of these prototypes are conceived to be employed at the chipset of newest generation wireline modems (ADSL and ADSL+). Others are intended for wireless transceivers. Besides analog-to-digital converters, the book also covers other functions needed for communication systems, such as digital-to-analog converters, analog filters, programmable gain amplifiers, digital filters, and line drivers.

Boards, Governance and Value Creation Morten Huse,2007-04-19 What is the role of boards in corporate governance? How should they be structured in order to maximize value creation? This 2007 book looks at the role of boards in a variety of different countries and contexts, from small and medium-sized enterprises to large corporations. It explores the working style of boards and how they can best achieve their task expectations. Board effectiveness and value creation are shown to be the results of interactions between owners, managers, board members and other actors. Board behaviour is thus seen to be a result of strategizing, norms, board leadership, and the decision-making culture within the boardroom. Combining value creation, behavioural and ethical approaches to the study of boards, this work offers a systematic framework which will be of value to graduate students and researchers in the field of corporate social responsibility and business ethics.
